

Supplementary Figure 2. Loadings scatter plots of the PLS-DA models between $\frac{1}{2}$ LC10 and LC10 showing the relationship between the Y-variable and the X-variables. Y-variable ($\frac{1}{2}$ LC10 versus LC10) is colored in blue. X-variables (metabolites) are colored in grey except the ones that were identified, which appear in red and with their respective identification name.
TDF: tenofovir disoproxil fumarate; TFV: tenofovir
